

HOW TO CLEAN THE HALO SHIELD

- The Halo Shield should be disengaged from the hook and loop pad to enable cleaning.
- Users should follow their own guidance procedures for cleaning and sterilisation subject to testing the cleaning solution of your choice on your own Halo Shield to protect the clarity and visibility of the Halo Shield.
- It is advised to you check your chosen cleaning solution on the Halo Shield visor, in a small, inconspicuous corner before carrying out the cleaning operation on the whole Halo Shield.
- We have produced a brief video on our website that can be viewed demonstrating a cleaning method. We have used a industry standard cleaning wipe which are used in our factory environment.
- For ease, Cleaning Wipe Satchets are available to purchase via our website.
- Storage of Halo Shield - we recommend the construction operative takes Halo Shield off when work has finished and places the Halo Shield in a air tight freezer bag until ready to use the following day.
